Milliman Mind

Milliman Mind

Problems

 <p>Financial modeling is mission critical to all functional areas in insurance companies.</p>	 <p>Excel has no audit trail or team work capabilities. Companies can have hundreds of spreadsheets per closing, with links between them, but there is no way to ensure reliability.</p>
 <p>The common platforms in the market can be less than ideal.</p>	 <p>Vendor modeling platforms are very costly to implement, document and maintain and the languages are not easy to learn, leading to a dependency to the software provider.</p>
 <p>In house developed modeling platforms are extremely costly requiring significant development environments and specially skilled programmers.</p>	

Product

Milliman Mind is a flexible and easy to use web-based platform which automatically converts Excel spreadsheets to more powerful financial models with all of the capabilities and controls of more expensive “black box” systems.

 <p>No proprietary language.</p>	 <p>Easy to implement, learn and use since the formula design is Excel based.</p>
 <p>Full audit trail and team work capabilities.</p>	 <p>Project management features and automated links between models improve security & reliability of the figures.</p>
